

November 22, 2024

To: Westminster Glen Homeowners Association

We have wrapped up our fuel reduction work in the Lot 21 greenbelt until 2025 and are pleased to note the following milestones:

- We have created shaded fuel breaks over approximately 6 acres; our driving goal was the removal of the dead and dying and the removal of "ladder fuels".
- There are at least 17 homes immediately impacted.
- The brush was chipped and broadcast throughout the area, eventually this should return to a healthy forest floor.
- We can now drive a brush truck from one entry point to the other, and now have vehicle access throughout. (seen as the orange line)

When we resume, I would advise continuing west, up the ravine. There is access, and drivable plateaus, but not within the Lot 21 boundaries.

We would need to seek approval by the owners of the yellow parcel above.

Please continue to discuss your future plans and we will visit again in Jan. / Feb. to see what our next steps should be.

Thanks to everyone for your help.

David Bailey
